

For Immediate Release

MachineryLink, Inc. Adds Over 70 New Combines to Fleet of Harvest Equipment

KANSAS CITY, Mo. (February 4, 2008) – MachineryLink, Inc., the leading provider of combine leasing programs to agricultural producers in North America, today announced the acquisition of more than 70 new combines to its fleet of late model harvest equipment. The addition consists of new John Deere 9770 STS and Case 2588 AFX combines, and will mean that more than 250 combines will be available for grower-customers for the 2008 harvest season.

“The demand and support for MachineryLink’s Managed Lease program has been incredible,” said MachineryLink President and CEO Scott Hazlett. “This investment will allow us to provide an ever increasing customer base with the latest in harvest technology.”

In 2007 MachineryLink’s managed lease combines helped grain producers in more than 30 states and the Western Canadian Provinces-- harvest over 1.5 million acres. Every year more farmers are coming to the realization that leasing otherwise under-utilized assets saves money, saves time, and provides the latest in harvesting technology.

“We’re thrilled to work with our network of dealer partners at Case and John Deere to make these brand new combines available,” Hazlett said. “Those dealers will also play a crucial role in helping MachineryLink provide service and repair to insure our customers will have minimal, if any harvest interruption.” In addition to the combines, MachineryLink continues to expand their support structure, strengthening their commitment to all aspects of the Managed Lease program.

About MachineryLink, Inc.

MachineryLink (www.machinerylink.com) is the leading and fastest growing provider of combine leasing programs to agricultural producers in North America. Its headquarters are in Kansas City, MO, with operational centers in Pratt, KS and N. Sioux City, SD. The company also maintains seasonal service facilities in five strategic locations across the United States. MachineryLink's unique Managed Lease program allows growers to significantly lower their equipment costs by providing the latest harvest technology and equipment with guaranteed delivery and pick-up.
