

Running the largest fleet of combines in North America has taught us a few things at MachineryLink. Seems as much as agriculture continues to change, some things remain the same.

Back in the day, when harvest time began, we all depended upon our neighbors. Whenever anything went wrong or we needed any help in the field, we could always depend on a neighbor.

In today's market, the most efficient harvest still requires a collective effort. That's why MachineryLink is developing a new in-field performance service for our customers, a new way to help you get the most from your combine during every harvest.

We are designing a new online tool, FarmLink, that will allow you to better manage your harvest each season. As a MachineryLink customer, this new web center will help you optimize the in-field harvest performance of your combine, ensuring you get the most from the field. And as we are developing FarmLink, we're partnering with some of the best in the business when it comes to precision farming, machine technology, and in-field communication.

Because at the end of the day, it's all about helping you get the most from the field. Real results, real time. Real impact to your bottom line.

You'll operate smarter, leave less in the field, and bring more to the bin, no matter where you're harvesting.

» Stay tuned, and welcome to Farmlink, neighbor.
